

CLEAN VERSION OF AMENDED CLAIMS

IN THE CLAIMS

Please amend claims 19-21, and 25 as follows:

19. A radio frequency device comprising:

Disposable attachment means for locating said device on an object or an individual to be identified, said attachment means being a disposable wristband, said wristband having opposite extremities;

reusable securement means demountably engagable with the opposite extremities of said wristband to maintain said wristband in temporary operative relationship with and being separable from said extremities when said wristband is discarded; and

radio frequency identification circuit embedded in said securement means for reuse with said securement means with a replacement wristband after the disposable wristband has been discarded;

wherein each of the opposite extremities passes through at least one opening in the securement means from a direction opposite that of the other extremity such that the opposite extremities overlap each other.

20. The device of claim 19 in which an antenna is located in said wristband and communicates with said radio frequency identification circuit when said securement means is operatively connected to said wristband.

21. A radio frequency identification device comprising:

disposable attachment means having opposite extremities;
securement means separably connected to said opposite
extremities of said attachment means for maintaining said attachment means
in temporary operative relationship with an object or individual to be identified;
and
radio frequency identification circuit means embedded in said
securement means and being removable with said securement means from
said attachment means for subsequent use with replacement attachment
means;
wherein each of the opposite extremities passes through at
least one opening in the securement means from a direction opposite that of
the other extremity such that the opposite extremities overlap each other.

25. Reusable securement means having a body with securement

portions thereupon, said securement portions being demountably engagable
with opposite extremities of disposable attachment means to maintain said
attachment means on an object or individual, said body having radio
frequency identification circuit means embedded therein;
wherein each of the opposite extremities passes through at
least one opening in the securement means from a direction opposite that of
the other extremity such that the opposite extremities overlap each other.

Please add new claims 28 and 29 as follows:

28. A radio frequency device comprising:

Disposable attachment means for locating said device on an object or an individual to be identified, said attachment means being a disposable wristband, said wristband having opposite extremities; reusable securement means demountably engagable with the opposite extremities of said wristband to maintain said wristband in temporary operative relationship with and being separable from said extremities when said wristband is discarded wherein said securement means includes a first end and a second end opposite side first end; and

radio frequency identification circuit embedded in said securement means for reuse with said securement means with a replacement wristband after the disposable wristband has been discarded;

wherein one of the opposite extremities engages one of the first and second ends of the securement means from a direction opposite to that in which the other extremity engages the remaining one of the first and second ends.

29. The device of claim 19 in which an antenna is located in said wristband and communicates with said radio frequency identification circuit when said securement means is operatively connected to said wristband.
